General Data

Artikel Nr.	32418880
Bestellzeichen	HRI-TS 150W/D/230/XLN/RX7S
EAN-Faltschachtel	4008597188800
Versandereinheit in Stk.	12
EAN Umkarton (Versandereinheit)	4008597488801
Brutto-Gewicht Versandereinheit in kg	0.447
Länge Versandereinheit in m	0.145
Breite Versandereinheit in m	0.113
Höhe Versandereinheit in m	0.153
Product weight	22 g
Produktstatus	Inaktiv

Electric Parameters

Wattage	150.0 W
Lamp nominal wattage	150 W
Weighted energy consumption in 1000 hours	165 kWh
Mains voltage	230 V
Ignition voltage	4.0 up to 5.0

Electric Parameters

Hot restrike voltage	35 kV
Lamp's nominal current	1.8 A
Nominal choke current	1.8 A
Compensation capacitor for 50Hz operation	20 µF
dimnable	Nein

Light Application Parameters

Luminous flux	13000 lm
Rated lamp luminous flux	13000 lm
Efficacy	86.67 lm/W
Total mains efficacy	87 lm/W
Colour temperature	5600 K
Color rendering index	81
Lumen maintenance at 2000h	0.86
Lumen maintenance at 4000h	0.84
Lumen maintenance at 6000h	0.77
Lumen maintenance at 8000h	0.74
Lumen maintenance at 12000h	0.70

Service Life

Average life	12000 h
Lamp survival factor at 2000h	0.95
Lamp survival factor at 4000h	0.90
Lamp survival factor at 6000h	0.85
Lamp survival factor at 8000h	0.80
Lamp survival factor at 12000h	0.50

Specification

Energylabel (G -> A)	G
Energylabel (E -> A++)	A
Diameter	23 mm
Length	135 mm
Total length max.	135 mm
Contact distance l	132 mm
Burning position	p45
Mercury content	12.1 mg

Specification

Lamp shape	Tube, double-ended
Model	Clear
Base	RX7s-24
Colour	White

Notes on Operation

Burning position	p45
------------------	-----

Information especially for EPREL

EPREL ID number	868751
-----------------	--------

Miscellaneous

EU Directive	TIM
Similar products	32419661, 32419475

Notes

Compact MH lamp with quartz burner, tubular bulb clear, daylight, base RX7s. Operation in enclosed luminaire, with ballast and ignitor.

Please, refer to www.radium.de/recycling for notes on disposal of burned-out lamps as well as lamp breakage.

The "lifespan L70" described for LED lamps indicates the number of hours when the luminous flux has decreased to 70% of its initial value.

The optimal field 'info about service life' contains the frame conditions according to standards based on which the specific service life has been determined. So, for example, "12B50, 50Hz" means that the mean service life (B50) has been determined with a 12h switching cycle at mains (frequency 50Hz), "3B50, HF" is based on a 3h switching cycle at electronic control gear (high frequency).

Spektrale Strahlungsverteilung

Natural daylight is a mixture of direct sunlight and the light of the sky. Therefore, its spectral composition changes permanently due to the changing time of day. The standardised light classification D65 corresponds to a daylight with a colour temperature of approximately 6500 K.

Every discharge lamp type has got an individual spectral power distribution according to its chemical filling. From this result important properties light colour or colour rendering.

Should the spectral lines be very close together the lamp presumably has got a very good colour rendering index, so, Ra might be near 100. Does the spectrum rather look like single lines or frayed out the colour rendering of the lamp will probably be not as good.

If number and height of the spectral lines within the blue range (around 400 nm) prevails it might be a lamp with a rather cold light colour like for example daylight. On the other hand, should the red (around 700 nm) or the red and yellow (around 600 nm) range be dominant one can assume that the lamp will be a rather warm light colour like WDL.

After the lamp start a metal hlide lamp needs about 2-4 minutes time to reach its full luminous flux, all colours in the spectrum are within the discharge arc then.

Visible region from 380 to 780 nm; height of graph corresponding with relative spectral emission (400mW/klm) per 10nm.

Schaltbeispiel(e)

Standard circuit HID with external ignitor

Key:

L. = lamp

VG = electromagnetic ballast (KVG/VVG)

P = phase

N = zero potential

K = p. f. correction capacitor

Z = ignitor

The required control gear (here ignitor and ballast) for the lamps operation is usually mounted in the suitable luminaire in an appropriate electric circuit. Changes of any kind are to be conducted by qualified and specialised staff, only. Thus, this circuit example is to be understood merely as a technical background information for interested users.

ECG-operation

Key:

L. = lamp

EVG = electronic ballast

P = phase

N = zero potential

The required control gear (here electronic ballast) for the lamps operation is usually mounted in the suitable luminaire in an appropriate electric circuit. Changes of any kind are to be conducted by qualified and specialised staff, only. Thus, this circuit example is to be understood merely as a technical background information for interested users.

Besonderheiten

Allgemeine Hinweise

The technical design data in accordance with DIN and IEC. The producer does not take any responsibility for damage to persons or property in case of unsuitable operation or handling of the product. Operating data and dimensions are valid within the usual tolerances. Related lamp types (different bases, mains voltages) may be available on request. Sale and delivery are effected in accordance with the Radium Terms of Delivery and Payment valid on the day of conclusion of contract. Packing units offer economical advantages to the purchase and logistic department. Please match your quantity volume accordingly. For orders of a minimum quantity (clefts) with a lamp model the amount lower than the volume of each packaging unit, we will invoice 10 % additional charge per lamp type. Technical changes and terms of delivery are reserved. Manipulation of any kind to packaging or product is not permissible as this will violate Radium brand rights. Furthermore, technical properties of the product can change to its disadvantage or even destruction. Therefore, Radium cannot be responsible for consequential damages.
