

Metal halide lamp with quartz burner

HRI-T 1000W/NSC/230/E40

Radium

Product Datasheet Date: 31.05.2026

A+

110000

3500K

9 000h

General Data

Code Radium	32416585
Désignation	HRI-T 1000W/NSC/230/E40
EAN 10 (unité)	4008597165856
Unité de transport (pièces)	6
EAN 40 (carton)	4008597465857
Poids brut du carton en kg	3.585
Longueur box in m	0.44
Largeur du carton en m	0.3
Hauteur du carton en m	0.21
Product weight	414 g
Product status	● Inactif

Electric Parameters

Wattage	1050.0 W
Lamp nominal wattage	1 kW
Lamp voltage	110-140 V
Lamp voltage	125 V
Mains voltage	230 V

Electric Parameters

Ignition voltage	4.0 up to 5.0
Lamp's nominal current	9.1 A
Nominal choke current	9.5 A
Compensation capacitor for 50Hz operation	85 μ F
Running up current max.	190%
Fuse	Delay-action; min. double nominal current
dimnable	Non
Controllable (in suitable circuit)	Non

Light Application Parameters

Luminous flux	110000 lm
Rated lamp luminous flux	110000 lm
Efficacy / Luminous efficiency	104.76 lm/W
Total mains efficacy	110 lm/W
Light colour	Neutral white
Colour temperature	3500 K
Color rendering index	64
Lumen maintenance at 2000h	0.90
Lumen maintenance at 4000h	0.86
Lumen maintenance at 6000h	0.82
Lumen maintenance at 8000h	0.78
Lumen maintenance at 12000h	0.73
Lumen maintenance at 20000h	0.67

Service Life

Average life	9000 h
Lamp survival factor at 2000h	0.99
Lamp survival factor at 4000h	0.95
Lamp survival factor at 6000h	0.83
Lamp survival factor at 8000h	0.62
Lamp survival factor at 12000h	0.16

Specification

Energylabel notice	old label, no EPREL registration, no EU data sheet
Energylabel (E -> A++)	A+
Diameter	76 mm

Metal halide lamp with quartz burner

HRI-T 1000W/NSC/230/E40

Radium

Specification

Length	345 mm
Total length max.	345 mm
Burning position	p30
Mercury content	110.0 mg
Lamp shape	Tube, single-ended
Model	Clear
Base	E40
Colour	White

Notes on Operation

Burning position	p30
------------------	-----

Information especially for EPREL

Energylabel notice	old label, no EPREL registration, no EU data sheet
--------------------	--

Miscellaneous

EU Directive	TIM
--------------	-----

Notes

Metal halide lamp with quartz burner, tubular bulb clear, high luminous flux, base E40. Operation in enclosed luminaire, with ballast and ignitor.

Please, refer to www.radium.de/recycling for notes on disposal of burned-out lamps as well as lamp breakage.

The "lifespan L70" described for LED lamps indicates the number of hours when the luminous flux has decreased to 70% of its initial value.

The optimal field 'info about service life' contains the frame conditions according to standards based on which the specific service life has been determined. So, for example, "12B50, 50Hz" means that the mean service life (B50) has been determined with a 12h switching cycle at mains (frequency 50Hz), "3B50, HF" is based on a 3h switching cycle at electronic control gear (high frequency).

Courbes spectrales

Natural daylight is a mixture of direct sunlight and the light of the sky. Therefore, its spectral composition changes permanently due to the changing time of day. The standardised light classification D65 corresponds to a daylight with a colour temperature of approximately 6500 K. Every discharge lamp type has got an individual spectral power distribution according to its chemical filling. From this result important properties light colour or colour rendering.

Should the spectral lines be very close together the lamp presumably has got a very good colour rendering index, so, Ra might be near 100. Does the spectrum rather look like single lines or frayed out the colour rendering of the lamp will probably be not as good.

If number and height of the spectral lines within the blue range (around 400 nm) prevails it might be a lamp with a rather cold light colour like for example daylight. On the other hand, should the red (around 700 nm) or the red and yellow (around 600 nm) range be dominant one can assume that the lamp will be a rather warm light colour like WDL.

Metal halide lamp with quartz burner

HRI-T 1000W/NSC/230/E40

Radium

After the lamp start a metal halide lamp needs about 2-4 minutes time to reach its full luminous flux, all colours in the spectrum are within the discharge arc then.

Visible region from 380 to 780 nm; height of graph corresponding with relative spectral emission (400mW/klm) per 10nm.

daylight(D 65)

Exemple(s) de circuit

Standard circuit HID with external ignitor

Key:

L. = lamp

VG = electromagnetic ballast (KVG/VVG)

P = phase

N = zero potential

K = p. f. correction capacitor

Z = ignitor

The required control gear (here ignitor and ballast) for the lamps operation is usually mounted in the suitable luminaire in an appropriate electric circuit. Changes of any kind are to be conducted by qualified and specialised staff, only. Thus, this circuit example is to be understood merely as a technical background information for interested users.

Particularités

Notices explicatives générales

The technical design data in accordance with DIN and IEC. The producer does not take any responsibility for damage to persons or property in case of unsuitable operation or handling of the product. Operating data and dimensions are valid within the usual tolerances. Related lamp types (different bases, mains voltages) may be available on request. Sale and delivery are effected in accordance with the Radium Terms of Delivery and Payment valid on the day of conclusion of contract. Packing units offer economical advantages to the purchase and logistic department. Please match your quantity volume accordingly. For orders of a minimum quantity (clefts) with a lamp model the amount lower than the volume of each packaging unit, we will invoice 10 % additional charge per lamp type. Technical changes and terms of delivery are reserved. Manipulation of any kind to packaging or product is not permissible as this will violate Radium brand rights. Furthermore, technical properties of the product can change to its disadvantage or even destruction. Therefore, Radium cannot be responsible for consequential damages.
